

The “Ultimate” Problem Water Product!

SENTRY I

Open-Air System

Protecting Your Water
24 Hours A Day
Every Day of the Year

Chlorination / Aeration is
one of the most powerful
Oxidizer / Sanitizers in the
industry today!

Provides “City-Like” water
pressure from the well to the
home.

The Sentry I Open-Air System will treat:

- Extreme H₂S
- Iron Bacteria
- Black Manganese
- Low Output Wells
- Sulfur Decaying Bacteria
- Tannins
- Arsenic
- Sulfur
- Algae
- Mold
- Methane Gas
- Radon Gas
- Low pH
- VOCs
- Iron

Better Water Industries, Inc .

“We take pride protecting your water”

Sentry I Open-Air System

For Aeration, Sanitation, Depressurization & Repressurization

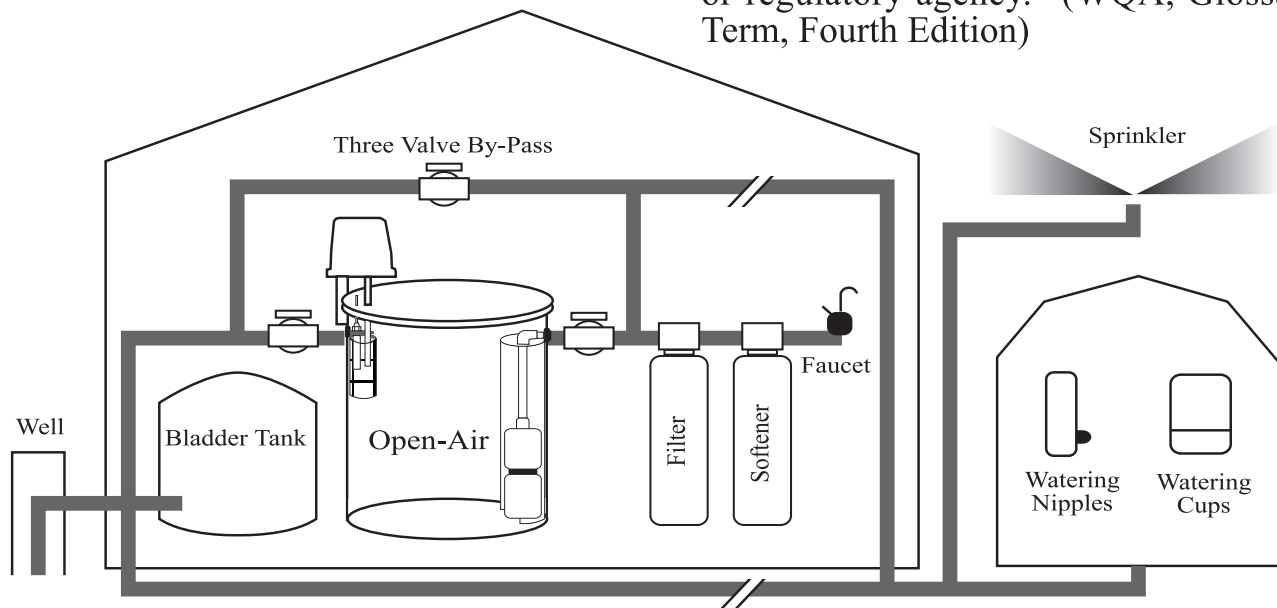

The Sentry I Open-Air System will treat water that was once thought impossible to treat through conventional means.

Home and business owners enjoy the Sentry I Open-Air System because of the inexpensive operation and simple maintenance.

The Sentry I Open-Air System combines aeration, chlorination, and degasification all in one simple package!

According to the World Health Organization, **disinfection by chlorine is still the best guarantee of microbiologically safe water** (WI-IO Regional Office for Europe, Drinking Water Disinfection).

“**Microbiologically unsafe water** - Water that 1) is known to contain disease-causing bacteria, viruses, protozoa or other disease-causing microbiological agents, or 2) shows a positive test for an indicator organism such as coliform, fecal coliform, or *E. coli* bacteria, or 3) is determined unsafe by an appropriate health or regulatory agency.” (WQA, Glossary of Term, Fourth Edition)

The Sentry I Open-Air System increases your water quality. An increase in water quality reduces your maintenance cost on all appliances that utilize water. Ice makers, dishwashers, washers, water heaters and every faucet in the house are affected by water quality!

If you live on a farm you'll enjoy even more added benefits. Many Open-Air customers agree the Open-Air System kills algae and bacteria in watering tanks which increases total herd health. Increased herd health reduces medication cost and increases overall production.

By using the Sentry I Open-Air System to oxidize iron for sprinkler systems, it will reduce up to 85% of the iron staining and will reduce troublesome sprinkler head clogs.
